Research Summary

Laparoscopic scissors are specialized surgical instruments designed for use in laparoscopic or minimally invasive surgeries. These scissors are part of a broader category of laparoscopic devices adapted for procedures performed through small incisions using a laparoscope for visualization. Laparoscopic scissors come in various designs, including straight, curved, or articulating blades, allowing surgeons to precisely cut tissues and perform dissections with enhanced maneuverability. The instruments are inserted into the surgical site through trocars or cannulas, and their design enables controlled and precise cutting while minimizing trauma to surrounding tissues. Laparoscopic scissors contribute to the benefits of minimally invasive surgery, such as reduced postoperative pain, faster recovery times, and smaller scars, making them integral tools in various laparoscopic procedures across different medical specialties.
