Research Summary

Large bore vascular closure devices are medical devices designed for the closure of large arterial punctures, particularly those created during procedures involving large catheters or sheaths. These closure devices play a crucial role in reducing the time and manual pressure required to achieve hemostasis (the prevention of bleeding) at the vascular access site. Large bore vascular closure devices typically consist of a bioabsorbable implant or plug that is deployed at the puncture site to seal the artery. This helps minimize the risk of bleeding complications and provides a more efficient and patient-friendly alternative to traditional manual compression. These devices are commonly used in interventional cardiology procedures, endovascular surgeries, and other interventions where large catheters are utilized, contributing to improved patient outcomes and a faster recovery process.

The major global manufacturers of Large Bore Vascular Closure Devices include Abbott Vascular, Abbott, Vascular Solutions, Essential Medical, InSeal Medical, Medeon
