Research Summary

Large Volume Parenteral (LVP) refers to sterile injectable solutions that are administered intravenously and have a volume exceeding 100 milliliters. These solutions are typically used for delivering fluids, electrolytes, nutrients, or medications directly into the bloodstream to treat various medical conditions. LVPs are crucial in healthcare settings where patients require substantial fluid replacement or when the oral route of administration is not feasible. The larger volume distinguishes LVPs from Small Volume Parenterals (SVPs), which have volumes of 100 milliliters or less. LVPs are prepared under strict aseptic conditions to ensure their sterility and safety for intravenous administration. Common examples of LVPs include saline solutions, dextrose solutions, and other intravenous fluids used in hospitals, clinics, and healthcare facilities to address dehydration, maintain electrolyte balance, or administer medications efficiently.

The major global manufacturers of Large Volume Parenteral (LVP) include Baxter Healthcare, Kelun Pharma, B. Braun, Fresenius, Teva Pharmaceutical Industries, Pfizer
