Research Summary

Laser cladding material refers to the substance used in the laser cladding process to add a layer of material onto a substrate for surface modification or repair purposes. This material is typically in the form of alloy powders or wire that is fed into the laser cladding system. The laser beam is then precisely focused on the substrate, melting and solidifying the added material to create a coated layer. The choice of laser cladding material depends on the specific requirements of the application, such as improving wear resistance, corrosion resistance, or restoring damaged surfaces. Laser cladding materials are carefully selected to ensure compatibility with the substrate material and to achieve the desired performance enhancements. Industries ranging from aerospace to manufacturing utilize laser cladding materials to enhance the durability and functionality of components subjected to challenging operating conditions.

The major global manufacturers of Laser Cladding Material include Oerlikon Metco, H?gan?s AB, Praxair S.T. Technology, Wall Colmonoy, FST, DURUM, Kennametal Stellite, Sentex-BIR, Hongbo Laser, AMC Powders, Henan Igood, etc. The global
