### Research Summary

Laser cleaning equipment is a specialized technology designed for the precise and efficient removal of contaminants, rust, coatings, or unwanted material from surfaces using laser beams. This equipment typically consists of a laser source, optics for focusing the laser beam, and control systems to adjust parameters like power and scanning patterns. During the laser cleaning process, the high-intensity laser beam is directed onto the surface, causing the undesired material to absorb the energy and undergo ablation, resulting in its removal. Laser cleaning equipment is utilized in various industries, including manufacturing, restoration, and conservation, for applications such as rust removal from metal surfaces, paint stripping, or cleaning delicate artifacts. This technology offers advantages such as minimal environmental impact, reduced waste generation, and the ability to perform precision cleaning on intricate or sensitive surfaces.
