Research Summary

Laser coding and marking equipment is a technology used for adding permanent and high-contrast markings onto products or materials using laser beams. This equipment is employed in manufacturing and packaging industries for purposes such as product identification, traceability, and branding. Laser coding and marking systems typically include a laser source, optics for focusing the laser beam, and a control system for precise and programmable marking. The laser beam interacts with the surface, causing localized changes through processes like ablation or color change, creating clear and durable markings. This technology is favored for its ability to mark a variety of materials, including plastics, metals, and packaging materials, with high precision and speed. Laser coding and marking equipment offers advantages such as non-contact operation, minimal maintenance, and the ability to produce intricate and detailed marks, making it a versatile solution for diverse industrial applications.

The major global manufacturers of Laser Coding and Marking Equipment include Han's
