Research Summary

Laser Computer to Plate (CTP) is a technology used in the printing industry to transfer digital images directly onto printing plates. In traditional plate-making processes, images were transferred using photographic methods, but CTP systems utilize lasers to engrave the image directly onto the plate. The process involves exposing a light-sensitive coating on the printing plate to a laser beam, selectively removing material to create the image. Laser CTP systems offer precision, speed, and flexibility in plate production, enabling efficient and high-quality printing. This technology is widely used in offset printing, where the engraved plates are used to transfer images onto the printing surface, leading to improved accuracy and consistency in the printing process. Laser CTP has become a standard in modern printing workflows, offering advantages such as reduced chemical usage, faster plate production, and the ability to reproduce intricate details accurately.

The major global manufacturers of Laser Computer to Plate (CTP) include Screen, Agfa, KODAK, Heidelberg, Fujifilm, Mitsubishi Imaging (MPM), Amsky, CRON, ESKO,
