### Research Summary

A laser interferometer is a precision measurement device that utilizes the interference of laser beams to make highly accurate measurements of length, displacement, or other physical quantities. In a laser interferometer, a laser beam is split into two or more paths, and these paths are then recombined. The resulting interference pattern is sensitive to changes in the length or position of the optical paths, allowing for precise measurements. Laser interferometers are widely used in metrology, optical testing, and scientific research for applications such as assessing the flatness of surfaces, measuring small displacements, and calibrating precision instruments. The high precision and sensitivity of laser interferometers make them valuable tools in various fields where precise measurements are essential.

The major global manufacturers of Laser Interferometer include Renishaw, Keysight, API, ZYGO, JENAer, Chengdu Tool Research Institute, Leice Technology, Chotest Technology Inc., Fujifilm, TOSEI Eng, Status Pro, Harbin Ultra Precision Equipment Engineering Technology Center Co.
