### Research Summary

A laser module is a compact and self-contained unit that integrates a laser diode, optics, and often additional components into a single package. These modules are designed for various applications, including laser pointers, alignment tools, or integration into larger systems for tasks like laser engraving or positioning. Laser modules emit a coherent and collimated laser beam, and they come in different configurations, including dot lasers, line lasers, and cross lasers, each serving specific purposes. The modular design allows for easy integration into diverse systems, making laser modules versatile tools in industrial, research, and consumer applications where a reliable and focused laser beam is required for tasks ranging from measurement and alignment to optical communication.

The major global manufacturers of Laser Module include Sumitomo Electric, Coherent, Laser Components, Newport Corporation, Z-LASER, Lecc Technology, Lumics, Jenoptik, Quarton, Laserex, Thorlabs, ProPhotonix, Kvant Lasers, Roithner Lasertechnik, Egismos, etc. The global players competition landscape in this report is divided into three tiers.
