### Research Summary

A laser particle size analyzer is an instrument used for measuring and analyzing the size distribution of particles in a sample. This device employs laser diffraction technology, where a laser beam is directed through a dispersed particle sample, and the scattering pattern is analyzed to determine the particle sizes. Laser particle size analyzers are widely used in various industries, including pharmaceuticals, chemicals, and materials research, to characterize powders, suspensions, and emulsions. They provide valuable insights into the particle size distribution, helping researchers and engineers optimize processes, improve product quality, and ensure consistent performance in diverse applications. The non-contact nature and high accuracy of laser particle size analyzers make them essential tools for understanding and controlling particle size characteristics in a wide range of materials.

The major global manufacturers of Laser Particle Size Analyzer include Malvern Panalytical, Beckman Coulter, OTSUKA Electronics, HORIBA, Anton Paar, Particle Sizing Systems (Entegris), Brookhaven Instruments, Microtrac MRB, Sympatec,
