Research Summary

Laser peening equipment is specialized machinery used in the process of laser peening, a surface treatment technique applied to metals to enhance their mechanical properties. Laser peening involves directing high-energy laser pulses onto the surface of a material, inducing shockwaves that create compressive residual stresses. This process improves the fatigue life, corrosion resistance, and strength of the material. Laser peening equipment typically includes a laser source, optics for beam delivery, and a system for precise control and positioning. It finds applications in industries such as aerospace, automotive, and power generation for strengthening critical components subjected to high-stress conditions. Laser peening is valued for its ability to increase the durability and longevity of metal components, making it an essential technology for enhancing the performance and reliability of critical structures in various engineering applications.

The major global manufacturers of Laser Peening Equipment include LSP Technologies, Inc., Toshiba, Tyrida Optical Electric Technology, Kunshan Carthing
