Research Summary

Laser Welded Finned Tubes are specialized heat exchanger components that are fabricated using laser welding technology. These tubes consist of a base tube and fins that are securely joined together through precise laser welding. The process involves focusing a laser beam on the joint area, melting and bonding the fins to the surface of the tube. This method provides a strong and durable connection, enhancing heat transfer efficiency in applications such as air-cooled heat exchangers and radiators. Laser welding offers advantages such as high precision, minimal heat-affected zones, and the ability to work with various materials. Laser Welded Finned Tubes are employed in industries where efficient heat exchange is crucial, including power plants, chemical processing, and HVAC systems, contributing to improved thermal performance and overall system effectiveness.

The major global manufacturers of Laser Welded Finned Tubes include Delfin Tubes, Energoinstal, Schmoele, Agetherma, Murphy Thermal Energy Technology, GLORYTUBETECH, Xuyi Titan and Materials, Hangzhou Fin Tube Pipe Industrial,
