Research Summary

Laser welding and cutting robots are robotic systems equipped with laser technology to perform precise welding and cutting tasks in various industrial applications. These robots utilize lasers as the primary tool for joining or cutting materials, offering advantages such as high speed, accuracy, and the ability to work with a variety of materials. In laser welding, the robot directs the laser beam to melt and fuse materials together, creating strong and precise welds. Laser cutting involves using the laser beam to melt or vaporize materials along a predetermined path, achieving clean and precise cuts. These robotic systems are commonly employed in manufacturing processes for automotive, aerospace, and other industries where precision and efficiency are paramount. Laser welding and cutting robots contribute to increased productivity, reduced waste, and improved overall quality in metalworking and fabrication processes.

The major global manufacturers of Laser Welding and Cutting Robots include FANUC, ABB, Yaskawa (Motoman), KUKA, Comau, Staubli, DENSO, Daihen, IGM, etc. The global players competition landscape in this report is divided into three tiers. The first
