Research Summary

Liquid crystal on silicon (LCOS) technology has been developed for many years for image and video display applications. This technology combines the unique light-modulating properties of liquid crystal (LC) materials and the advantages of high-performance silicon complementary metal oxide semiconductor (CMOS) technology through dedicated LCOS assembly processes. Unlike the conventional LC flat panel displays, an LCOS device can be either transmissive or reflective and can be used to alter the polarization or the phase of an incident light beam utilizing the electrically modulated optical properties of LCs. Such devices are usually called LCOS spatial light modulators (SLMs).

The major global manufacturers of LCoS Spatial Light Modulators (LCOS-SLM) include Hamamatsu Photonics, HOLOEYE Photonics, Meadowlark Optics, Santec Corporation, Thorlabs, Jenoptik, Forth Dimension Displays (Kopin), Jasper Display Corp., CAS Microstar, UPOLabs, etc. The global players competition landscape in this report is

divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
