Research Summary

LED grow lights for plants are specially designed artificial lighting systems that use light-emitting diodes (LEDs) to support plant growth by providing the necessary spectrum of light for photosynthesis. These lights can be customized to emit specific wavelengths, such as blue and red light, which are essential for different growth stages, from seedling development to flowering. Compared to traditional grow lights like fluorescent or high-pressure sodium (HPS) lamps, LED grow lights are more energy-efficient, generate less heat, and have a longer lifespan. They are widely used in indoor farming, hydroponics, greenhouses, and vertical agriculture to enhance plant yield, optimize growth cycles, and enable cultivation in environments with limited natural sunlight. Their ability to provide targeted light spectra makes them an essential tool for modern controlled-environment agriculture.

The major global manufacturers of LED Grow Lights for Plants include Signify, GE Lighting, ams OSRAM, Cree LED, Gavita, Everlight Electronics, Lumileds, Kessil, Valoya, Heliospectra AB, Senmatic, AIS LED Light, Yaham Lighting, Longood, Growray,
