### Research Summary

LED street lighting is a type of lighting system used for outdoor street lighting. It uses LED (Light Emitting Diodes) technology to provide bright and energy-efficient lighting for streets, roads, highways, and other outdoor public areas.

LED street lighting offers numerous advantages over traditional lighting systems, such as fluorescent lighting or High-Pressure Sodium (HPS) lighting. LED streetlights consume significantly less energy, which translates to a lower electricity bill and reduced carbon footprint. They last much longer, typically up to 25 years, which minimizes the maintenance and replacement costs associated with traditional lighting systems.

LED streetlights produce more focused and uniform lighting, enabling better visibility and reducing glare and shadows. This, in turn, increases public safety by allowing drivers and pedestrians to see more clearly in the dark.

LED street lighting can also be programmed and controlled through smart lighting systems, allowing brightness levels to be adjusted to match the specific lighting requirements of different times of day or changing weather conditions, leading to even

more energy savings.

The major global manufacturers of LED Street Lighting include Cree, LEOTEK, Hubbell, Acuity Brands, LSI Industries, GE Lighting, Philips Lighting, Eaton(Cooper), Osram, Kingsun, Excellence Optoelectronics, Revolution Lighting, etc. The global players competition landscape in this report is divided into three tiers.
