Research Summary

LiBOB, or lithium bis(oxalato)borate, is a chemical compound used as an electrolyte additive in lithium-ion batteries. It plays a crucial role in enhancing the performance, stability, and safety of the batteries. LiBOB acts as a stabilizing agent that helps form a stable solid-electrolyte interphase (SEI) layer on the surface of the anode, which is essential for preventing electrolyte decomposition and improving the battery's cycle life. Additionally, it contributes to high thermal stability and reduces the risk of battery degradation at elevated temperatures. The use of LiBOB in lithium battery electrolytes can also enhance the battery's performance in terms of capacity retention and rate capability. As a result, LiBOB is an important component in the development of advanced lithium-ion batteries for applications ranging from consumer electronics to electric vehicles and renewable energy storage systems.
