Research Summary

A light intensity meter is a device that measures the amount of light in a given area. It is commonly used in photography, lighting design, or environmental studies to quantify the level of illumination.

Light intensity meters use a photodiode, photovoltaic cell, or photoresistor to measure the light. They display the measurement in different units, such as lux or foot-candles, and come in various types, including handheld meters, compact sensors, or smartphone apps.

Light intensity meters have various applications, including measuring the light levels in classrooms, offices, or industrial spaces to ensure adequate lighting for workers or studying plants' growth in different light environments. They can also be used to identify areas where the light is too bright or insufficient and for documenting and measuring light pollution levels in urban areas.

The major global manufacturers of Light Intensity Meter include Konica minolta, Testo AG, EVERFINE Corporation, TES, Photoelectric Instrument Factory of Beijing Normal

University, Smartsensor, SENSINGM, Lisun Electronics, CEM, HCJYET, etc. The global players competition landscape in this report is divided into three tiers.
