Research Summary

Light switches and electrical sockets are commonly found in most homes and buildings. They are used to control the flow of electrical power to various devices and systems, including lighting fixtures, appliances, and electronic devices.

A light switch is a device that is used to turn on and off lights or other electrical fixtures. The switch is typically a small panel that is mounted on a wall or in a box, and features an on/off toggle or push button. When the switch is turned on, electrical power flows through the wires to the light or fixture, causing it to turn on. Conversely, when the switch is turned off, the flow of power is cut, and the light or fixture turns off.

Electrical sockets, also known as outlets or receptacles, are designed to provide access to electricity through a wall or other fixture. They typically feature two or three prongs, and are designed to accept a plug from an electrical device, such as a lamp, a computer, or a television. When a plug is inserted, electrical power flows through the wires in the wall, providing power to the device.

Light switches and electrical sockets are usually wired into a building's electrical system

by an electrician. They are typically installed during the construction of a building or as part of a renovation project. In some cases, electrical outlets may also be added or relocated to better suit the needs of the building's occupants.

The major global manufacturers of Light Switches and Electrical Sockets include Legrand, Schneider, Siemens, ABB, Panasonic, Honeywell, BULL, Leviton, Simon, Lutron, T&J, Feidiao Electrical, Vimar SpA, SOBEN, Hubbell, etc. The global players competition landscape in this report is divided into three tiers.
