Research Summary

Light vehicle front end modules, also known as FEMs, are pre-assembled structural components that include the front bumper, grille, headlights, fenders, hood, and other related parts. They are designed to simplify the manufacturing process of vehicles and reduce assembly time and costs.

FEMs are manufactured by suppliers and are then delivered to the automotive assembly plants where they are installed into the vehicle body. This modular approach allows automakers to maximize their production capacity and simplify the assembly process. FEMs can be customized based on the model and brand of the vehicle, and they are designed to enhance the car's styling and improve its aerodynamics.
