Research Summary

Lighting controls refer to devices or systems used to manage the intensity, color, and timing of artificial lighting in a building. They offer several benefits, including energy savings, increased user comfort and convenience, and improved safety and security.

There are many types of lighting controls, including:

1. **Dimmers:** These devices allow the user to adjust the brightness of the light source to their desired level.
2. **Timers:** These devices can be programmed to turn lights on and off at specific times, or to vary the lighting pattern throughout the day.
3. **Occupancy sensors:** These sensors detect when a space is occupied and can automatically turn lights on and off accordingly.

4. Photosensors: These sensors detect the amount of natural light and can adjust the artificial lighting accordingly.

5. Color tuning systems: These systems allow the user to adjust the color temperature of the light source, which can affect the mood of the space.

The major global manufacturers of Lighting Controls include Savant Systems, Acuity Brands, Schneider Electric, Ideal Industries, Legrand, Universal Douglas Lighting Americas, Lutron, Honeywell, Signify, Crestron, Leviton, etc. The global players competition landscape in this report is divided into three tiers.
