### Research Summary

LIM (Liquid Injection Molding) and LSR (Liquid Silicone Rubber) are two types of injection molding processes used to produce components made of silicone rubber. They are similar in the way that they both use liquid silicone rubber as the raw material to produce the components, but they differ in the way that they inject the material into the mold.

LIM injection machines use a high-pressure injection process to inject the liquid silicone rubber into the mold. The process uses a piston to inject the material into the mold, which is then heated and cured.

LSR injection machines, on the other hand, use a low-pressure injection process, where the material is injected into the mold with a screw or plunger. The material is also heated and cured in the mold.

The major global manufacturers of LIM & LSR Injection Machines include Arburg, Engel, Sumitomo, KraussMaffei, Wittmann, Tianyuan Technology, Nissei Plastic, FUICHA, SODICK, Yizumi Precision Machinery, MULTIPLAS ENGINEERY, FOMTEC
