Research Summary

A line reactor, also known as an inductor or choke, is an electrical device used to improve the performance and longevity of power systems by reducing harmonics, protecting against voltage spikes, and mitigating electrical noise. It consists of coils of wire that create inductance when current flows through them, introducing impedance into the circuit. Line reactors are commonly installed in the input or output stages of variable frequency drives (VFDs), inverters, and other power electronic devices. By smoothing out the current and voltage waveforms, they help to protect sensitive equipment, enhance power quality, and ensure stable operation in industrial and commercial electrical systems.

The major global manufacturers of Line Reactor include Mdexx, Mangoldt, ABB, Siemens, Schaffner, KOSED, Franklin Control Systems, Hammond Power Solutions, Ingersoll Rand, Trafox, MTE Corporation, Shandong Hada Electric, Zhenxiao Electrical, EPA GmbH (en), BLOCK, etc. The global players competition landscape in this report is divided into three tiers.
