Research Summary

A line scan camera is a specialized type of digital camera that captures images one line at a time instead of capturing the whole image at once. It is commonly used in industrial applications where high-speed and high-resolution imaging are required, such as in printing, paper inspection, and web inspection. The camera works by continuously scanning a narrow strip of the object or surface being inspected, producing a series of images that can be stitched together to create a full image. Unlike traditional cameras that capture an entire scene in a single snapshot, a line scan camera is able to capture a continuous image of a moving object, such as a conveyor belt, without blurring the image.

The major global manufacturers of Line Scan Camera include Teledyne, Basler, Cognex, Vieworks, JAI A/S, HIK vision, Huaray Tech, Nippon Electro-Sensory Devices (NED), Chromasens, etc. The global players competition landscape in this report is divided into three tiers.
