Research Summary

Linear friction welding machines are a type of welding machine that uses friction to create a bond between two metal parts. The process involves pressing two metal parts together and then rapidly moving one part back and forth against the other, generating heat through friction that melts and fuses the metal together. Linear friction welding machines are typically used for high-stress and high-strength applications, such as in aerospace, automotive, and industrial manufacturing. They are capable of welding a range of metals, including titanium, aluminum, steel, and nickel alloys. Some examples of linear friction welding machines in use today include GKN Aerospace's LF35 machine for airplane engines and ARRK's FSW-06 for automotive parts.

The major global manufacturers of Linear Friction Welding Machines include Branson (Emerson), Bielomatik, Crest Group, Thompson (KUKA), MTI, Dukane, Daeyoung Ultrasonic, Seidensha Electronics, CEMAS ELETTRA, Sonics Materials, Keber, ShangRong, etc. The global players competition landscape in this report is divided into three tiers.
