Research Summary

A linerless printer is a type of thermal printer that can print on a self-adhesive label without using a liner or backing paper. This type of printer is commonly used in retail, food service, and other industries that require labeling for products, packaging, and shipping. The label material is usually made of a specialty adhesive that allows the label to stick to itself without the need for a liner. This reduces waste and makes it more cost-effective to print labels in large quantities. Linerless printers can also improve efficiency by printing multiple labels at once, eliminating the need to load new rolls frequently.
