Research Summary

Liposuction surgical pumps are medical devices used during liposuction procedures. They are also known as tumescent liposuction infusion pumps or infiltration pumps. These pumps are used to infuse fluids, such as tumescent solution, into the targeted area before liposuction is performed.

Liposuction surgical pumps play a crucial role in delivering the tumescent solution into the targeted area. They typically consist of a sterile infusion bag or container that holds the tumescent solution. The pump is connected to a series of sterile tubes and a cannula (a small stainless steel tube used for suctioning the fat).
