Research Summary

Liquid Applied Sound Damping (LASD) coating is a specialized material used to reduce noise and vibrations in various applications, particularly in automotive, marine, and architectural industries. It is typically a viscoelastic polymer-based compound that can be applied as a liquid and cures into a flexible, durable coating. LASD coatings are designed to adhere to a variety of surfaces, including metal, plastic, and fiberglass, forming a dense, sound-absorbing layer that dissipates mechanical energy and dampens vibrations. By reducing noise transmission and resonance, LASD coatings improve the acoustical comfort and quality of vehicles, vessels, and buildings, enhancing the overall user experience. Additionally, these coatings can provide thermal insulation and corrosion protection benefits in addition to their primary function of sound damping.

The major global manufacturers of Liquid Applied Sound Damping (LASD) Coating include Henkel, EMS EFTEC, TGPM, Qingdao Aierjia, Daubert Chemical, PPG, Silent
