Research Summary

Liquid Crystal on Silicon (LCoS) is a display technology that combines the properties of liquid crystals and silicon to create high-resolution and high-quality images. In LCoS, liquid crystal material is sandwiched between a transparent electrode and a reflective silicon backplane, forming a microdisplay. When an electrical signal is applied to the liquid crystal layer, it modulates the polarization of light passing through it. The reflected light then passes through a color filter and an optical system to project an image onto a screen. LCoS offers several advantages such as excellent color reproduction, high contrast ratios, and absence of the 'screen door effect,' making it suitable for applications like high-definition projectors, head-mounted displays, and augmented reality devices.

The major global manufacturers of Liquid Crystal on Silicon (LCoS) include OmniVision, HOLOEYE Photonics AG, Himax, JVC, Sony, Canon, Syndiant, Jasper Display Corp, etc. The global players competition landscape in this report is divided into three tiers.
