Research Summary

A liquid crystal panel display, commonly referred to as an LCD (Liquid Crystal Display), is a type of flat-panel display technology used in electronic devices such as televisions, computer monitors, smartphones, and more. The LCD consists of multiple layers, including two polarized glass substrates with a layer of liquid crystals between them. These liquid crystals can be manipulated by applying electric currents to control the passage of light through the display. Unlike emissive displays like OLEDs, LCDs rely on a separate backlight source, typically LEDs (Light-Emitting Diodes), to illuminate the screen. By modulating the light passing through individual pixels using liquid crystals, LCDs can display images and videos with high resolution, vibrant colors, and excellent clarity, making them widely used and versatile in various consumer and industrial applications.

The major global manufacturers of Liquid Crystal Panel Display include Panasonic, Sharp, LG Display, Innolux, AUO, Samsung Display, InfoVision Optoelectronics, BOE, Japan Display, CSOT, Tianma, CPT, CEC-Panda, Hannstar, etc. The global players
