Research Summary

Liquid filter cartridges are essential components used in filtration systems to remove impurities, contaminants, and particles from liquids. These cartridges consist of a cylindrical housing typically made of materials like polypropylene, stainless steel, or fiberglass, which contains a filter media designed to capture particles of various sizes. The filter media can be composed of materials such as cellulose, activated carbon, polypropylene, or ceramic, depending on the application and the type of contaminants being targeted. Liquid passes through the filter cartridge, and particles are trapped within the media, while the purified liquid flows out. Filter cartridges are available in various configurations, including wound, pleated, melt-blown, and depth filters, each offering different levels of filtration efficiency and capacity. They are used in a wide range of industries, including water treatment, pharmaceuticals, food and beverage, chemical processing, and automotive, to ensure the quality and purity of liquids for various applications.

The major global manufacturers of Liquid Filter Cartridges include Veolia, Eaton, Parker

Hannifin, Merck, Pall, Pentair, Filtration Group, Donaldson, Bright Sheland, Kitz, Obninsk Filters, Rosedale Products, JNC Filter, Shelco Filters, Hongtek Filtration, Porvair Filtration, Gopani Product Systems, Liquid Filtration Systems, Filtcare Technology, etc. The global players competition landscape in this report is divided into three tiers.
