Research Summary

Liquid helium is a fascinating substance that results from the cooling of helium gas to extremely low temperatures, reaching close to absolute zero. It is the second coldest liquid in the universe and possesses unique properties that distinguish it from any other material. With a boiling point of -268.93 degrees Celsius, liquid helium exhibits remarkable characteristics such as near-zero viscosity, enabling it to flow without friction. It also displays superfluidity, meaning it can flow through minuscule openings without any resistance or loss of kinetic energy. Liquid helium's extraordinary properties make it essential for various scientific and technological applications, including low-temperature physics research, superconductivity studies, and the operation of certain medical imaging devices.

The major global manufacturers of Liquid Helium include RasGas (QA), Exxon (US), Linde (US and AU), Air Product (US), Praxair (US), Air Liquide (DZ), Gazprom (RU), PGNiG (PL), etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong

competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
