### Research Summary

A liquid metal electromagnetic pump is a device that utilizes the combined forces of liquid metal flow and electromagnetic fields to generate pumping action. It consists of a chamber containing liquid metal, typically a conductive fluid such as sodium or gallium, and a series of electromagnetic coils placed around the chamber. When an electric current is passed through the coils, a magnetic field is created, interacting with the liquid metal, inducing a Lorentz force that propels the fluid in a specific direction. This technology is commonly employed in various industrial applications such as cooling systems in nuclear reactors and high-temperature heat transfer systems, where the unique properties of liquid metals, such as their high thermal conductivity and resistance to corrosion, make them well-suited for such demanding environments.

The major global manufacturers of Liquid Metal Electromagnetic Pump include Precimeter, Pyrotek, Creative Engineers, Shijiazhuang Idea electric, MaiNiTe Electric, Shijiazhuang Magnetic City Electric, HEBEI UNIQUE ELECTRIC, etc. The global
