Research Summary

Liquid mulching film is an innovative agricultural technique that involves applying a thin liquid layer to the soil surface, which forms a protective and biodegradable film once it dries. This liquid film, typically composed of natural biopolymers or biodegradable materials, acts as a barrier against weeds, reduces soil erosion, conserves moisture, and moderates soil temperature, creating an ideal microenvironment for plant growth. It provides all the benefits of traditional plastic mulching films while eliminating the need for their disposal, as the liquid film breaks down naturally over time, minimizing environmental impact and promoting sustainable farming practices.

The major global manufacturers of Liquid Mulching Film include Advanced Micro Polymers, Qianyue, Jin He, Mingrui, HengTa, etc. The global players competition landscape in this report is divided into three tiers.
