### Research Summary

Liquid Organic Hydrogen Carriers (LOHC) are a promising technology for storing and transporting hydrogen, a clean and efficient energy carrier. LOHC systems involve reversible chemical reactions where hydrogen is absorbed into an organic liquid carrier, forming a stable compound. This carrier liquid can then be stored and transported under ambient conditions, simplifying logistics compared to compressed or cryogenic hydrogen storage. When needed, the hydrogen can be released from the carrier through a catalytic process, providing a reliable source of energy for various applications such as fuel cells or combustion engines. LOHC technology offers advantages like high energy density, low risk of leakage, and compatibility with existing infrastructure, making it a key contender in the transition to a hydrogen-based economy.

The major global suppliers of Liquid Organic Hydrogen Storage (LOHC) include WUHAN QINGYANG ENERGY CO.,LTD, Chiyoda Corporation, Hydrogenious Technologies?HT?, SLOHC, HydroTransformer, China National Chemical Engineering
