Research Summary

A liquid particle counter is a device used to measure and analyze the concentration and size distribution of particles suspended in a liquid. It utilizes various techniques, such as light scattering, to detect and quantify particles within a liquid sample. The instrument typically consists of a sample chamber, a light source, and a detector. As the liquid passes through the sample chamber, particles scatter light, which is then detected and analyzed to determine the particle size and concentration. Liquid particle counters find applications in a wide range of industries, including pharmaceuticals, environmental monitoring, semiconductor manufacturing, and water treatment, where the control and analysis of particle contamination are critical.

The major global manufacturers of Liquid Particle Counter include Particle Measuring Systems, Rion, Lighthouse Worldwide Solutions, Beckman Coulter, Entegris (PSS), PAMAS, Topas, Hal Technology, Chemtrac, Suzhou Sujing, Markus Klotz GmbH, etc. The global players competition landscape in this report is divided into three tiers.
