### Research Summary

A liquid-powder dual chamber bag is a packaging design that consists of two separate chambers within the same bag, each containing a different product—typically a liquid and a powder. These chambers are usually divided by a seal or barrier that prevents the contents from mixing until they are ready to be used. This type of packaging is commonly used for products where it's important to keep certain ingredients separate until the moment of use, ensuring freshness, stability, and effectiveness. For example, in the beauty industry, dual chamber bags can hold liquid and powder components separately until they are combined during application, maintaining the potency of the product. In food packaging, they can keep dry and liquid ingredients separated until they are ready to be mixed, preserving the taste and texture of the final product. Dual chamber bags offer convenience, precise dosing, and extended shelf life for various consumer products.

The major global manufacturers of Liquid Powder Dual Chamber Bag include Otsuka Pharmaceutical, B. Braun, Taiho Pharmaceutical, Nipro Pharma, Beijing RuiYe
