### Research Summary

Liraglutide is a medication that belongs to the class of drugs called glucagon-like peptide-1 receptor agonists (GLP-1 agonists). It is primarily used to manage blood sugar levels in adults with type 2 diabetes. Liraglutide works by mimicking the effects of a natural hormone called glucagon-like peptide-1, which helps regulate blood sugar levels by stimulating insulin secretion, reducing appetite, and slowing down the emptying of the stomach. In addition to its glucose-lowering effects, liraglutide has also been approved for weight management in individuals who are obese or overweight and have certain weight-related medical conditions. It is administered as a once-daily injection and has demonstrated effectiveness in improving glycemic control and promoting weight loss in clinical studies.
