### Research Summary

Lithium-ion batteries are commonly used to power drones due to their high energy density, lightweight design, and rechargeable nature. These batteries consist of lithium-ion cells, which store and release energy through a chemical reaction involving lithium ions moving between the battery's positive and negative electrodes during charge and discharge cycles. In drone applications, lithium-ion batteries provide the necessary power for propulsion and onboard electronics, enabling extended flight times and high performance. However, the use of lithium-ion batteries in drones requires careful handling and maintenance to ensure safe operation, as they are prone to overheating and can pose fire hazards if damaged or improperly handled.
