### Research Summary

A Lithium-ion Capacitor, also known as a Li-ion capacitor or LIC, is an energy storage device that combines the best features of lithium-ion batteries and electric double-layer capacitors (EDLCs). It utilizes a hybrid construction, incorporating a lithium-ion battery electrode for high energy density and an activated carbon electrode for high power density. This combination enables the Li-ion capacitor to deliver both rapid energy discharge and long-term energy storage capabilities, making it suitable for applications requiring high power bursts and frequent charge/discharge cycles. The LIC offers a balance between energy and power, making it a promising solution for various industries, including electric vehicles, renewable energy storage, and portable electronics.

The major global manufacturers of Lithium-ion Capacitor include JM Energy, Taiyo Yuden, VINATech, Cap Energy, Jianghai, EVE Energy, TIG, etc. The global players competition landscape in this report is divided into three tiers.
