Research Summary

Lithium tetraborate, also known as lithium borate or $\text{Li}_2\text{B}_4\text{O}_7$, is a chemical compound composed of lithium, boron, and oxygen. It is a white crystalline solid that is soluble in water. Lithium tetraborate is commonly used in analytical chemistry as a flux for preparing samples for X-ray fluorescence (XRF) analysis. In this application, it helps to dissolve and homogenize solid samples, allowing for accurate elemental analysis. Additionally, lithium tetraborate is used as a flux in glass and ceramic manufacturing processes, where it helps to lower the melting point of materials and improve their flow properties. It is also employed in the production of specialty glasses, such as optical glasses and fiberglass. Furthermore, lithium tetraborate has applications in nuclear technology as a neutron shielding material and in the production of lithium-based chemicals and materials. Its unique properties and versatile applications make lithium tetraborate an important compound in various industries and research fields.
