Research Summary

In Vitro Release Testing (IVRT) is a laboratory method used to assess the release rate of active pharmaceutical ingredients (APIs) from a drug formulation, typically for topical, transdermal, or other non-oral dosage forms. The test involves simulating physiological conditions in a controlled environment, where a sample of the drug product is placed in a release medium, and the amount of drug that is released over time is measured. This helps evaluate the drug's bioavailability, predict its therapeutic effectiveness, and ensure the formulation is consistent with regulatory standards. IVRT is commonly employed during the development and quality control of drug products like creams, patches, and ophthalmic formulations.

The major global suppliers of In Vitro Release Testing (IVRT) include Raptim Research, SGS, The J. Molner Company, BioLink Life Sciences, Joanneum Research, Stira Pharmaceuticals, CPL, MedPharm, Eurofins, Diteba, Nuvisan, QPS, CD Formulation, Tergus Pharma, Sun-Novo, Frontage, Porton, Standard Testing Group, etc. The global players competition landscape in this report is divided into three tiers.
