Research Summary

A load moment indicator (LMI) is a device commonly found in cranes, primarily mobile or crawler cranes, that provides real-time monitoring and feedback on the crane's load and moment capacity. It is designed to prevent potential tipping or overloading accidents by ensuring that the operator stays within safe operating limits. The load moment indicator utilizes sensors and data inputs, such as boom length, angle, and load weight, to calculate the crane's moment capacity and display it to the operator. The LMI system provides visual and audible warnings if the crane approaches or exceeds its capacity, allowing the operator to take corrective actions. Some advanced LMI systems can also record and store operational data, enabling analysis and evaluation of crane performance and safety.

The major global manufacturers of Load Moment Indicator include Wika, Rayco-Wylie, Yichang Jinglian, TWG Dover, Parker Electronic Controls, Cranesmart Systems, Weite Technologies, Suns Technology, Wylie Indicators, Shanghai Xiya, Keli Sensing, Yichang Wanpu, Wide Technology, Chengdu Hi-Tech Crane Safety, Markload Systems,
