### Research Summary

Long fiber reinforced thermoplastic (LFT) material is a type of composite material consisting of thermoplastic polymer matrix reinforced with long fibers such as glass, carbon, or aramid fibers. Unlike short fiber reinforced thermoplastics (SFT), which have fiber lengths typically less than 1mm, LFT materials have fibers ranging from several millimeters to several centimeters in length. This long fiber reinforcement imparts significant mechanical properties to the thermoplastic matrix, including increased strength, stiffness, impact resistance, and fatigue resistance. LFT materials are manufactured through processes such as injection molding, compression molding, or extrusion, where the long fibers are evenly dispersed and aligned within the polymer matrix to optimize mechanical performance. LFT composites find applications in various industries such as automotive, aerospace, sporting goods, and consumer products, where lightweight, high-strength materials are required to replace traditional metal or short fiber reinforced plastics in structural components and parts.

The major global manufacturers of Long Fiber Reinforced Thermoplastic Material include LOTTE CHEMICAL, SABIC, JNC Corporation, RTP Company, Daicel Polymer Limited, Techno Compound, Nippon Electric Glass (PPG), KINGFA, PlastiComp, Celanese, etc. The global players competition landscape in this report is divided into three tiers.
