Research Summary

Long Glass Fiber Reinforced Polypropylene (LGFPP) is a composite material that combines polypropylene (PP) as the matrix polymer and long glass fibers as the primary reinforcement. The long glass fibers in LGFPP typically have a length of around 10-25 mm, which provides excellent mechanical properties to the material. The long fibers are dispersed within the PP matrix, resulting in enhanced strength, stiffness, and impact resistance compared to traditional short fiber reinforced polypropylene. LGFPP offers improved dimensional stability and creep resistance, making it suitable for applications that require structural integrity under load conditions. It also exhibits good resistance to chemicals, moisture, and temperature variations. LGFPP can be processed using various methods such as injection molding, compression molding, and extrusion, making it versatile for manufacturing complex parts. Due to its lightweight nature, cost-effectiveness, and superior mechanical performance, LGFPP finds applications across industries such as automotive, aerospace, industrial equipment, and consumer goods.

The major global manufacturers of Long Glass Fiber Reinforced Polypropylene include SABIC, Celanese Corporation, Daicel Polymer, PolyOne, Lotte Chemical, Solvay, PPG Fiber Glass, RTP, Core Molding Technologies, PlastiComp, Mitsubishi Rayon, Toray, Teijin, etc. The global players competition landscape in this report is divided into three tiers.
