Research Summary

A longwave infrared imager, also known as a LWIR imager, is a device that captures images using longwave infrared radiation. Unlike visible light imaging, which captures images based on the reflection of light, LWIR imagers operate in the infrared spectrum, specifically in the wavelength range of 8 to 14 microns. This type of imaging allows for the detection and visualization of thermal signatures emitted by objects and surroundings. LWIR imagers are commonly used in various applications, including surveillance, security, industrial inspections, firefighting, and medical diagnostics. They can detect temperature differences and provide valuable information about heat distribution, allowing users to identify anomalies, monitor thermal patterns, and make informed decisions in a wide range of scenarios. LWIR imagers are invaluable tools for professionals seeking to enhance situational awareness and obtain thermal information not visible to the naked eye.

The major global manufacturers of Longwave Infrared Imager include Teledyne FLIR, GUIDE, Thales Group, Dali, Fluke Corporation, SATIR, MSA Safety Incorporated,
