Research Summary

Low Altitude Surveillance Radar (LASR) is a type of radar system designed specifically for detecting and tracking airborne targets at low altitudes, typically below 3,000 feet above ground level (AGL). LASR systems are crucial for monitoring airspace in areas such as airports, military installations, border security, and critical infrastructure sites. They employ advanced radar technologies such as Doppler radar, phased array radar, or pulse-Doppler radar to detect and track aircraft, helicopters, drones, and other low-flying objects. LASR systems provide real-time data on target position, altitude, speed, direction, and size, helping air traffic controllers, defense personnel, and security agencies to maintain situational awareness, identify potential threats, and ensure safe and secure airspace operations. These radar systems often integrate with other surveillance and communication systems for comprehensive airspace management and defense capabilities.

The major global manufacturers of Low Altitude Surveillance Radar include Thales, Airbus, IAI, SRC, CETC, Blighter, Bharat Electronics, etc. The global players
