### Research Summary

Low Density Ammonium Nitrate (LDAN) refers to a type of ammonium nitrate fertilizer that has been specially formulated to have a lower density compared to standard ammonium nitrate products. This lower density makes LDAN easier to handle, transport, and spread, particularly in agricultural applications where precise application rates are required. LDAN typically contains a higher proportion of porosity or void space within the granules, reducing the overall bulk density while maintaining the nitrogen content essential for plant growth. The lower density of LDAN granules allows for improved flowability and spreading uniformity when applied through fertilizer spreaders, minimizing the risk of uneven distribution and ensuring more consistent crop growth. Additionally, LDAN may also have specialized coatings or additives to enhance its performance and nutrient release characteristics, making it a versatile and efficient fertilizer option for agricultural producers.

The major global manufacturers of Low Density Ammonium Nitrate (LDAN) include

CSBP, Dyno Nobel, Enaex, Acron, Yara, Uralchem, Group DF, Carbon Holdings, BME, DFPCL, Shaanxi Xinghua Chemistry, Jinkai Group, ChinaCoal Pingshuo Coal, Shanxi Tianji Coal Chemical Group, Hubei Kailong Chemical, GESOC, etc. The global players competition landscape in this report is divided into three tiers.
