Research Summary

Low flow high head pumps are a type of centrifugal pump designed to handle relatively small flow rates while generating high discharge pressures. These pumps are engineered to efficiently move fluids in applications where a significant amount of head or pressure is required, but the flow rate is comparatively low. They are commonly utilized in industries such as oil and gas, chemical processing, mining, and water treatment, where there is a need to overcome resistance or elevation changes. The design of low flow high head pumps typically involves impellers with smaller diameters and high rotational speeds to generate the necessary pressure. These pumps are well-suited for systems with long pipelines, high vertical lifts, or processes that demand precise control and delivery of fluids in smaller quantities. They offer reliable and efficient operation while maintaining the desired pressure levels in low flow applications.

The major global manufacturers of Low Flow High Head Pumps include Flowserve, Teikoku, KSB, Sulzer, ITT Goulds Pumps, Sundyne, Weir, Ruhrpumpen, Speck Group, Sero PumpSystems, Shimge Pump, MP Pumps, Honda Kiko, Tsurumi Pump, Summit
