Research Summary

Low melting point polyester staple fiber refers to a type of polyester fiber that has a lower melting temperature compared to traditional polyester fibers. These fibers are manufactured using a specialized polyester resin that has been modified to have a lower melting point, typically ranging from 100 to 170 degrees Celsius. The lower melting point allows the fibers to melt and fuse at lower temperatures, making them suitable for applications where heat-sensitive materials or low-temperature bonding processes are employed. Low melting point polyester staple fibers are commonly used in nonwoven fabrics, thermal bonding applications, and textile manufacturing, where they can be easily bonded together using heat. This property offers advantages such as reduced energy consumption, shorter processing times, and the ability to bond with a wide range of materials without causing damage or deformation. These fibers provide versatility and flexibility in manufacturing processes and are widely used in industries such as automotive, apparel, upholstery, and filtration.

The major global manufacturers of Low Melting Point Polyester Staple Fiber include Huvis, Toray Chemical Korea, Yuanfang (China) Investment, Nan Ya Plastics Corporation, Xianglu Chemical FIBER Company Limited, Yangzhou Tinfulong Atutomotive Interior Trim Fiber, Ningbo Dafa Chemical Fibre, Taekwang, Hickory Springs, Dividan, Sinopec Yizheng Chemical Fibre Limited Liability Company, CNV Corporation, Shyam Fibers, Elite Color Environmental Resources Science&Technology, Xiamen Xiangyuxinghong Technologies, etc. The global players competition landscape in this report is divided into three tiers.
